

Now, anyone can reset sound posts quickly and easily.

The patent pending design of our Gemini Sound Post Setter Tool allows anyone to reset sound posts in violins, violas, cellos and basses. No more dropped posts and frustrating removal.

Our tool holds the sound post securely against the saddle at the tip of the tool. This makes it easy to insert the sound post through the f-hole and into proper position without the risk of the sound post becoming dislodged as could happen with a traditional sound post tool. In addition, the fixed geometry of the sound post and tool assembly allows you to precisely locate the sound post within the instrument. Finally, our unique release mechanism gently releases the tool from the sound post once it is in position.

This tool greatly benefits stringed instrument teachers because it allows them to quickly reset sound posts in student instruments, instead of sending them out for repair. This minimizes cost while maximizing practice time for the student.

THREE DIFFERENT MODELS AVAILABLE!

- ⇒ Violin/Viola Sound Post Setter Tool
- ⇒ Cello Sound Post Setter Tool
- ⇒ Bass Sound Post Setter Tool
